PROFILE

Full-stack developer (React / TypeScript, Python / FastAPI). I build applications that integrate generative AI end to end: React front end, FastAPI back end, PostgreSQL, and multi-provider LLMs with tool calling, structured outputs, RAG and streaming. I also run a self-hosted multi-agent automation platform in production. 3 years of web development, then 2.5 years of application engineering.

PROFESSIONAL EXPERIENCE

Application & Data Management Engineer — Jan 2024 - Jun 2026

DARES | *French Ministry of Labour, statistics & research directorate*

- L1/L2 application support for ~300 users in a high-criticality environment: application deployment, access rights, remote database access (ODBC), statistical environments (R / RStudio).
- Secured sensitive data exchanges with INSEE (national statistics) and France Travail (employment agency) through the CASD secure enclaves; ~100 tickets a month, from business requirements to validation.

Web Developer — Sep 2020 - Aug 2023

DEFI-METIERS | *Greater Paris public agency for vocational training*

- Developed and maintained the agency's public web platforms (Drupal / PHP) for training providers and career advisors.
- Migrated the regional training catalogue from Dokelio to Ofeli: redesigned and optimized SQL queries on high-volume data.

TECHNICAL PROJECTS

Netherbrain — 2026

LLM orchestration platform

- Full-stack Python / React: FastAPI back end (Pydantic, SQLAlchemy, Alembic migrations), PostgreSQL + pgvector, React / TypeScript front end, real-time Server-Sent Events streaming.
- Multi-provider LLM integration: OpenAI SDK and any compatible API (local Ollama on GPU, OpenRouter, Groq), per-response metrics (time to first token, tokens/s).
- Tool-using agent: multi-turn tool calling loop (file reading, search, editing, git), with a diff shown and explicit user approval before every write.
- RAG over attached documents; 300+ automated tests (pytest, Vitest), GitHub Actions CI against a real PostgreSQL, multi-stage non-root Docker Compose.

Homelab — 2026

self-hosted infrastructure

- Dedicated server running Proxmox behind an OPNsense firewall, reachable only through a self-hosted WireGuard VPN; hardening: IPv4 + IPv6 host firewall, 2FA, key-only SSH.
- Automated VM backups with a tested restore path; architecture and procedures fully documented and version-controlled.

REPOSITORY github.com/sma-ali/Homelab-Demo

Multi-agent automation platform — 2026

personal project in production

- End-to-end LLM pipelines in Python: specialized agents, automated review, human validation before release, scheduling.
- Model chosen per task, cost tracking and automatic fallback between API and subscription; self-hosted server (Proxmox, OPNsense, WireGuard).

SKILLS

Front-end

React · TypeScript · Next.js · Vite · Tailwind · Three.js

Back-end

Python · FastAPI · Pydantic · REST API · SSE · PostgreSQL / pgvector · Alembic · Node.js / Express

AI & LLM

Anthropic API · OpenAI SDK · Ollama · Tool calling · Structured outputs · AI agents · RAG · Prompt engineering

DevOps & quality

Docker Compose · GitHub Actions · CI/CD · Git · pytest · Vitest · Linux · Nginx · Proxmox

Other

SQL · PHP / Drupal · Agile / Scrum

EDUCATION

Master's Degree | Computer Science & Information Systems
EPSI Paris La Défense · Apprenticeship
2021 - 2023

Bachelor's Degree | Web Development
My Digital School, Paris · Apprenticeship
2020 - 2021

LANGUAGES

French ..... Native
English ..... Bilingual (C2)

STRENGTHS

Self-directed & proactive · Fast learner · Turning business needs into software · Strong written & verbal communication

INTERESTS

- Theatre (6 years, performed at the Odéon national theatre)
- Football / Grappling / Weight training
- Competitive esports (League of Legends, top 0.1%)
